

Save your screen as JPG file

After installing HP HP Prime version (10077) of the firmware it is possible to save your screen as JPG file for sharing purposes. Here's a simple how-to for this new function.

Learn more about HP Prime:
<http://www.hp-prime.com>

Whenever you want to save a screen, press **Shift** and **View Copy** and choose one of the 'Graph Options' 1-9. Remember which app you're working in, as you need this in the next step.

Open the home-screen with **Settings** and choose the **Vars** button to open the variables. Open the app in which you've copied the screen and choose option 4 (Modes). Now choose option 5 (AFiles). Add the following data to the variable: `AFiles(„image.jpg“):=G1` and press **Enter**.

In the Connectivity Kit you will find the JPG file in the used app (see screen on the right) to use or share on your computer.
