

## TECHNOLOGY CORNER

### 6. Normal probability plots

To make a Normal probability plot for a set of quantitative data:

- Enter the data values in list D1 of the Statistics 1Var app. We'll use the state unemployment rates data from page 122.
- Define H1 as shown in the Symbolic view of the app. (Tap **Choose** and select *Normal Probability* for **Plot1**.)

- Press **V** and select *Autoscale* to see the finished graph.

*Interpretation:* The Normal probability plot is quite linear, so it is reasonable to believe that the data follow a Normal distribution.
